Re: Compatibility with CPVC and PVC Piping

The Icynene Insulation System[®] is a two-component, open celled, flexible, light density all water blown polyurethane foam that is a combination air barrier and thermal insulation. The two components consist of component A, Isocyanate MDI, and component B, a proprietary resin.

As a stable inert product, Icynene[®], by definition will not react or effect surrounding construction materials including CPVC and PVC piping. Icynene[®]'s trained and certified dealers have insulated and air-sealed over 70,000 buildings and there has not been any reports of deterioration of CPVC or PVC piping systems to date.
