

Securock Shears:

Past experience with the 1/2" and 5/8" Securock relative to contractor application with field cuts, was to recommend electric cement fiber shears which allowed ease of cutting (particularly radius cuts) and reduced dust.

KAMCO Distributors is a source - Snapper Shear SS-460 will cut up to 5/8" while the 6604 model was appropriate up to 5/16" thickness.

Porter Cable from Jackson, TN also sold shears (generally \$250 for the heavy cut machine).
